## Improving Performance Through Automation

Challenge

The client's legacy reporting system was a manual process requiring manipulation by the end-user. The data provided was also days to weeks out of date.

Strategy

The team at Ascension partnered with the end-users to determine the objectives of the reports. We then created web-based graphical reports using real-time data.

Result

Client management had access to the most recent data to make more time-sensitive decisions while eliminating time spent on creating reports.
